

Eurosilicone™

Proven safety profile

Low rupture rate and excellent safety profile at 5 years.

- Ongoing 10 year study across 17 centres in France.
- First study to be published on European women.

5 year data results –

Round and anatomical silicone gel breast implants.

Published in Plastic and Reconstructive Surgery (PRS)*.

Complication	Rate per implant (%) ¹ (n=1010)	Rate per patient (%) ² (n=534)
Rupture	0.2	0.4
Capsular contracture	6.6	9.7
Haematoma	2.3	3.4
Infection	0.4	0.6
Seroma	0.1	0.2

534 women were implanted with 1010 implants for cosmetic and reconstructive purposes.

EUROSILICONE™

¹ Actual complication rates as presented based on number of implants placed.

² Actual complication rates as presented based on number of patients implanted.
